Research projects

We offer field research projects and facilities for students / interns from BSc to PhD level with an interest in animal behaviour, ecology and botany. Mogalakwena reserves have a high biodiversity and your research questions can be answered by studying our birds, primates, herbivores, carnivores and / or vegetation of the sweet arid bushveld. The duration of your internship could be anything between 2 weeks to 2 years.

MOGALAKWENA
RESEARCH CENTRE

Together we design a program that suits your academic requirements and personal interests.
