

***Call for ideas « Let's make universities more sustainable and responsible »***

The [EUniWell alliance](#), composed by 8 European universities, aims at increasing the well-being of students by putting sustainable development challenges at the heart of its activities.

A call for ideas especially dedicated to students will be launched between 16/09/2022 and 11/10/2022 to better understand students' expectations to make Universities more sustainable and more responsible.

Students are invited to propose ideas or projects that would contribute to reduce the carbon footprint of universities by filling in the [following form](#).

The Form is very short and simple so just go ahead and help us in finding solutions for the future of universities !

Student laureates will be selected based upon the originality and the feasibility of their proposals. A balanced representation between EUniWell Universities will be ensured.

The laureates will be selected by a jury composed by the members of the EUniWell working group on sustainable development, that is in charge of developing a common culture of environmental sustainability across the EUniWell campuses.

The laureates of this call for ideas will be invited to a 4-day study trip (November 15-18) in Nantes during which they will :

- Participate in a hackathon focusing on the reduction of the carbon footprint of the universities in order to define common projects that could be implemented by all the EUniWell partners
- Contribute to the first EUniWell forum on sustainable development
- Take part in the events organised during the Nantes Université Sustainable Development Week (GRÜN Festival)
- Visit the Nantes Université Green Campus
- Meet students involved in the fight against climate change

Travel, accommodation and subsistence costs will be covered by EUniWell.

Following this study trip, the students will be full members of the « EUniWell Green Students Community ».
